

The aim of this guidance is to provide information about urological products that are used regularly and recommended by Continence/Urology Specialists in this area. It highlights and recommends the most effective, high quality, cost-effective urology products available to prescribe. Prescribers should note that from time-to-time Continence/Bladder & Bowel Nurses may recommend alternative products based on the clinical need of a Patient and following a thorough assessment. All prices are Drug Tariff July 2022.

Important things to consider before issuing a prescription for a urology appliance:

- Always confirm with the patient what they already have in stock and what they need wherever possible.
- Do not issue any post-dated prescriptions.
- Do not issue or add new urology appliances to a patient’s repeat prescription unless they have been initiated and approved by a qualified healthcare professional (e.g., Bladder & Bowel Specialist Clinician; an NHS commissioned Community Nurse providing the patient’s care plan or by a Registered Nurse at the resident’s care home with nursing). Requests should adhere to the formulary unless there is written evidence or a clinic letter in the patients’ notes detailing the rationale for deviating from the formulary.
- Non-formulary requests for new items directly from a Dispensing Appliance Contractor (DAC) on behalf of the Patient should be approved by the NHS employed/Commissioned healthcare professional responsible for the patient’s care plan.
- Do not re-issue any missing prescriptions that have already been supplied to a DAC without investigating first.
- Do not issue prescriptions >14 days before they are needed, except if the patient/carer states they need their prescription early for a valid reason (e.g., to cover a holiday) or the patient has been classed as an ‘at risk’ patient.
- Do not issue higher quantities than those recommended in these guidelines, except on the **documented** advice of a qualified healthcare professional (e.g., Continence/Bladder & Bowel Nurse; an NHS commissioned Community Nurse providing the patient’s care plan or by a Registered Nurse at the residents Care Home with Nursing).
- Frequent requests for high quantities may indicate that the patient has a problem and needs to be reviewed. If you are concerned about the quantities prescribed or early prescription requests, please contact the healthcare professional responsible for the patient’s care (e.g., Care Home Nurse, Community Nurse providing the care plan).
- Do not issue a prescription for any item that has already been supplied by a DAC in advance, except:
 1. in an emergency where an NHS employed/commissioned Nurse has contacted the GP practice directly, explained the reasons for the urgent need, **and** authorisation has been granted by a prescriber at your practice first.
 2. when it is the first appliance prescription request for a new patient who has recently been discharged from hospital. There is a local agreement that the DACs will deliver new patients their products soon after hospital discharge, in order to expedite the discharge process. Outside of this, DACs are contractually required to only supply appliances upon receipt of a valid prescription.
- Hospitals should ensure that at least one week’s supply of products is with the patient on discharge.

ITEMS NOT TO BE PRESCRIBED ON FP10

Product	Rationale	Exception
Any form of skin wipes	Not clinically necessary	Unless for a sheath patient requiring skin protection.
Adhesive remover sprays		
Disposal bags	Not prescribable on FP10	None
Incontinence pads	Not prescribable on FP10. Separate pathway available for supply via Sirona Bladder & Bowel Service	
Urinals	These can be purchased online or from a community pharmacy from £2.50.	

The following tables outline the normal usage of items. The over-ordering of products leads to waste and it could be an indicator that the patient would benefit from a continence review. If the quantities requested fall outside of those specified, or if new items are being requested without appropriate information/deviation from the formulary, contact the qualified healthcare professional responsible for the patient's care e.g. continence/Bladder & Bowel Nurse; community nurse or the care home with nursing nurse.

SHEATHS (Latex free)

Manufacturer	Description	Code	Pack size	Price	Normal usage

B. Braun	Uro-Tainer Twin Suby G	9746609	2 x 30ml	£5.42	

* These products must be prescribed as 2 x 50ml at a time. A repeated treatment of 2 x 50ml is more effective than 1 x 50ml or 1 x 100ml.

INDWELLING CATHETERS (Long Term) (Latex Free)

All in pack sizes of one catheter

Manufacturer	Description	Code	Price	Normal usage
Clinisupplies	Prosyls All Silicone	<i>Male open ended:</i> PCF12M10E to PCF18M10E <i>Male:</i> PCF12M10 to PCF18M10 <i>Female:</i> PCF12F10 to PCF18F10	£5.79 to £5.94	Can remain in situ up to 12 weeks. 4-5 catheters a year.
Great Bear	GB All Silicone	<i>Standard/Male:</i> 4833-0512 to 4833-0524	£6.28	
Coloplast	Folysil X-Tra	<i>Male:</i> AA8A12 to AA8A22 <i>Female:</i> AA8B12 to AA8B18	£6.72	
Coloplast	Folysil X-Tra Silicone	<i>Male open ended:</i> AA8C12 to AA8C18	£6.80	
LINC Medical	LINC All Silicone (Not for suprapubic use)	Tiemann Tip Male: 1011UB12 to 1011UB18	£8.89	

Important!

- The antimicrobial catheter Inflation solution 'Farco-fill Protect' has been discontinued by the manufacturer.
- Remember to issue Urinary Catheter Passport and document on EMIS.
- Anyone with a urinary catheter in situ must have a catheter management plan and must not to be discharged from community caseload.
- Male urethral catheterisation must only be performed using a male or standard length catheter.
- Patients should keep 2 spare catheters in stock in case of blockage. Supply 3 catheters to patients at their initial catheterisation.
- Patients requiring a catheter with a 30ml balloon should be under the care of the Urology Team and have a clear management plan in place.

CATHETER LUBRICANTS

*Products containing chlorhexidine have a risk of anaphylactic reaction (MDA Alert 25/10/2012)

Lubricant	Contains Lidocaine	Contains Chlorhexidine*	Code	Price	Normal usage
